WATER DRAINAGE SYSTEM

Rainwater direction

Drainage output

① Louver Roof

The louver roof design includes inclined horizontal blades so that the can still receive light and air, and it can also prevent rain and heat. In addition, we use the newly up-graded louver design to make the sealing more tight.

② LED strips

The LED light adopts 4000K, with sufficient brightness , controlled with the same system of louver roof.It can be optional for perimeter loop roof and on each post or on surround decorative top.

③ Gutter

Enlarged gutter improve the drainage system to ensure waterproof in heavy rainy days.

④ Motor Device

Waterproof motorized operation with both remote control and wall switch.
